

mdi ClariCap GS Microglassfiber Capsule Filters are multilayered, high throughput filters, specially designed for turbid and difficult to filter solutions. The microglassfiber medium is designed to retain colloidal particles and for removal of deformable and non-deformable particles and microorganisms from liquids.

The polypropylene layer downstream of microglassfiber layers prevents media migration. The high dirt holding capacity, biochemical inertness, adsorption and high wet strength of the filtration medium makes it suitable for clarification and prefiltration of wide range of aqueous, non-aqueous and biologicals solutions.

Special Features

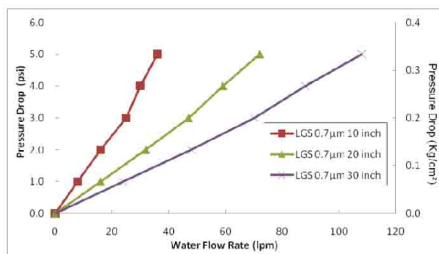

- Very high particulate retention efficiency
- High throughput
- High heat resistance
